

Quick Guide: Diagnosis User Rights 2022

Step 1 – Identification for XENTRY Flash users

With the launch of the car model series **223 and 213 Facelift**, Daimler AG is simultaneously presenting a new security and identification concept for XENTRY Diagnosis applications. To enable you to continue working as usual with your XENTRY Flash user privileges, you will have to reconfirm your access rights (steps 1-3) and carry out an identification check (steps 4-6). This will ensure that your account cannot be activated by another person. For this purpose you have received an e-mail from your national representative.

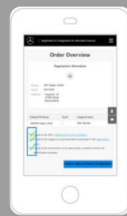

Have your smartphone (with camera) and an official identification document ready. Make sure that you have a stable network connection and that there is adequate light in the room.

1

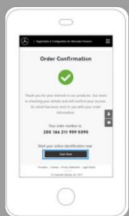

Follow the link in the e-mail from your market and log in on the Daimler Web Login screen using your current XENTRY Flash user data.

<https://umas.daimler.com/umas/xflash> Start the process from your smartphone or a PC.

2

Complete the confirmation by clicking the button "Confirm data and production configuration". Remember to consent to the Terms & Conditions and data protection guidelines beforehand.

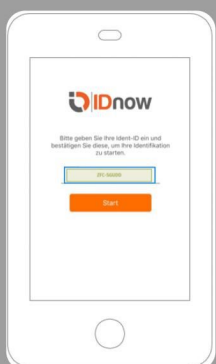

3

In the order overview you will see your order number (for any support queries) as well as the starting point for the identification process. Start this process with the "Start now" button.

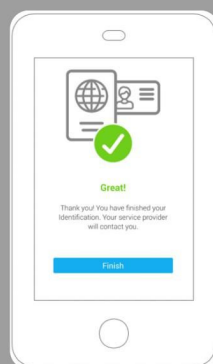

4

You have now received your individual **Ident ID**. Now install the IDnow app (either via the SMS link or from the App/Google Play Store) and open it. For the next step in the process you will need a smartphone.

5

Enter the **Ident ID** provided in the appropriate field and launch the identification process by clicking on the "Start" button.

6

When you have completed the identification process successfully, you can exit the IDnow app by clicking on "Finish". You will also receive a confirmation by e-mail to your e-mail account.
